

Would it work if I prepared a (long) spreadsheet like this:

Subject	Domain	$P_1$	$P_2$	$P_3$	$P_4$	$P_5$
1	6	1	3	2		
1	1	2	5			
$\vdots$	$\vdots$					
1	23	5	1	3	2	4
2	8	4	3			
$\vdots$	$\vdots$					

The first two lines mean the following: Subject 1's first choice is from domain 6 (Juice) and the choice set consists of objects 1, 3 and 2 (Mango, Apple, Orange), listed (on the  
5 screen) in that order. Subject 1's second choice is from domain 1 (Male Stars) and the choice set consists of objects 2 and 5 (Kevin Spacey and Christian Bale) in that order.
