

Description and choice data for the domain “Juices”

Description of the choice domain 6, Juices

The prompt question and the universe of five response options in the choice domain **Juices** are as follows. The labels a , b , c , d and e were not displayed during the experiment and are indicated here to allow cross-referencing with data tables and visualizations below and results in the paper.

Which one of the following fresh juices would you choose?

- Mango
- Orange
- Apple
- Grapefruit
- Pineapple

The following figure is a screenshot from the actual experiment, with one of the 26 possible menus for this domain.

Juices

Which one of the following fresh juices would you choose?

☐ Orange

☐ Grapefruit

Table 1: Observed choice counts and proportions.

Choice data for domain 6, Juices

Table 1 shows choice counts and choice proportions for this choice domain. For each menu A and each object $x \in \{a, b, c, d, e\}$, $N_A(x)$ is the number of participants who chose object x from menu A and $\hat{P}_A(x)$ is the corresponding proportion of participants who chose x from A . When $x \notin A$, a dash is displayed.

The following figure displays choice proportions for all doubleton and tripleton menus in Barycentric coordinates. See a full description of this graphical representation in the paper. Each panel shows choice proportions for all doubleton and tripleton menus of a different tripleton subset of $\{a, b, c, d, e\}$. The downward-pointed (blue) triangle shows the set of ternary choice proportions that are compatible with regularity and the three binary choice proportions, on the corresponding tripleton. The upward-pointed (red) triangle shows the set of ternary choice proportions compatible with the multiplicative inequality and the three binary choice proportions.

Warning in tritrafo(x, y, z): negative components
