

Description and choice data for the domain “Music”

Description of the choice domain 11, Music

The prompt question and the universe of five response options in the choice domain **Music** are as follows. The labels *a*, *b*, *c*, *d* and *e* were not displayed during the experiment and are indicated here to allow cross-referencing with data tables and visualizations below and results in the paper.

The choice objects in this domain are the top selling musical artists of all time, according to Wikipedia. They should be familiar to a large majority of respondents. The name for this domain used in data files and documents, “Music” is an abbreviation of the title seen by participants, “Musical artists”.

Which one of the following musical artists do you like the best?

- The Beatles
- Elvis Presley
- Michael Jackson
- Madonna
- Elton John

The following figure is a screenshot from the actual experiment, with one of the 26 possible menus for this domain.

The screenshot shows a choice menu titled "Musical artists" in blue. Below the title is a horizontal line. The question "Which one of the following musical artists do you like best?" is displayed. Two radio button options are listed: "Michael Jackson" and "The Beatles". At the bottom right, there is a blue button with the text ">>". A progress bar is visible above the button, showing a blue segment on the left and a grey segment on the right.

Table 1: Observed choice counts and proportions.

Choice data for domain 11, Music

Table 1 shows choice counts and choice proportions for this choice domain. For each menu A and each object $x \in \{a, b, c, d, e\}$, $N_A(x)$ is the number of participants who chose object x from menu A and $\hat{P}_A(x)$ is the corresponding proportion of participants who chose x from A . When $x \notin A$, a dash is displayed.

The following figure displays choice proportions for all doubleton and tripleton menus in Barycentric coordinates. See a full description of this graphical representation in the paper. Each panel shows choice proportions for all doubleton and tripleton menus of a different tripleton subset of $\{a, b, c, d, e\}$. The downward-pointed (blue) triangle shows the set of ternary choice proportions that are compatible with regularity and the three binary choice proportions, on the corresponding tripleton. The upward-pointed (red) triangle shows the set of ternary choice proportions compatible with the multiplicative inequality and the three binary choice proportions.
